Part B. CV SUMMARY

Encarnación Ruiz Agudo (since July 2023, Full Professor, and formerly Assistant Professor and Ramón y Cajal Researcher at the Department of Mineralogy and Petrology, University of Granada) is a Chemical Engineer from the University of Granada (July 2003) and Technical Industrial Engineer by the University of Jaén (September 2006). She began her research activity with a research initiation scholarship from the Department of Chemical Engineering of the University of Granada, funded by the company PULEVA Biotech S.A. (February 2003-

March 2004). From 01.04.2004 to 14.01.2009 she worked in the Department of Mineralogy and Petrology of the University of Granada, where she carried out her pre-doctoral research supervised by Prof. Carlos Manuel Rodríguez Navarro, funded by the European Union through the SALTCONTROL project (FP6) and “*Plan Propio de Investigación*” of the University of Granada. She received her doctorate in December 2007 within the Earth Sciences Doctorate Program. She carried out pre- and post-doctoral stays (29 months) at internationally renowned centers, including The Getty Conservation Institute (Los Angeles, USA) and the Institute für Mineralogie of the University of Münster (Germany). In this last center she worked for 24 months (2009-2011) funded by a Marie Curie postdoctoral contract in the group of Professor Andrew Putnis. During her research career she has participated in 16 research projects, funded by the International Campus of Excellence PATRIMONIUM-10, the Junta de Andalucía, the National R & D Plan and the European Union, being a Principal Investigator (PI) in eight of them. Her research has been conducted in collaboration with international (researchers from Germany, England, France, Australia and China) and multidisciplinary (geologists, chemists, microbiologists, physicists and restorers) teams. The results of her research activity have been published in a total of 98 publications (index h: 42, WOS) in scientific journals of recognized international prestige collected in the JCR as well as in more than 90 papers presented at international and national conferences. Likewise, the results of her research have given rise to two patents, currently exploited by the company TRENZAMETAL S.L. Her research career has been awarded with several national and international awards, including the Young Researcher Award of the Spanish Society of Mineralogy (2008), Young Scientist Outstanding Poster Presentation Award (YSOPP) of the European Geoscience Union (2009), Arne Richter Award for Outstanding Young Scientists of the European Geosciences Union (2012), European Mineralogical Union Research Excellence Medal (2014), and the Young Researchers Award of the Social Council of the UGR (2015). Her research focuses on getting a better understanding of the processes of dissolution, growth and mineral replacement, as well as the effect of organic compounds in them, using in-situ techniques such as atomic force microscopy (AFM), with diverse applications including the protection of ornamental materials used in the built heritage, cement industry, biomimetic lime plasters with plant extracts and CO₂ capture through carbonate mineralization (as the result of the research in this last line I hold 2 patents).
